OVERVIEW

Create angular application that will show all our users using map and a list.

GOALS

1. Create Single Page Application with run script
2. Download list of generated users on run time (http://beta.jsongenerator.com/ to generate data)
3. List must contain at least 100 users.
4. List must support the ability to sort by age/name, add or delete users.
5. Each user will appear as dot on the map (you can select your own images/styles)
6. Deploy the code to your github account

SPECIFICATIONS

User object should include the attributes: id, isActive,age,picture, email, latitude, longitude. Each

user will have a "box" for himself, only the map will be shared UI component.

(Do not use any angular table external package as ng-grid,slickgrid - should be list not table) First User

names letter should be capitalize

MILESTONES

User list

Each user will have its own attributes displayed

Map

Map will show all users by coordinates
